

CSE2031 Software Tools – Lab Exercise

June 15, 2010

1 Copy

Write an ANSI-C program that makes a copy of a file passed as a first argument to the file which name is passed as a second argument. Sample call can look as follows

```
mycp src dst
```

where src and dst are names of files. Your program should handle basic error (file does not exist, cannot read a file).

2 Reading and writing files

Write an ANSI-C program that

- reads a content from a file, which name has been passed as a first argument,
- reverses the content and
- writes to the file which name is passed as a second argument

```
reverse src dst
```

where src and dst are names of files. Your program should handle basic error (file does not exist, cannot read a file).
