

Introduction to UNIX

CSE 2031
Fall 2011

6 November 2011

Introduction

- UNIX is an operating system (OS).
- Our goals:
 - Learn how to use UNIX OS.
 - Use UNIX tools for developing programs/software, specifically shell programming.

2

Processes

- Each running program on a UNIX system is called a process.
- Processes are identified by a number (process id or PID).
- Each process has a unique PID.
- There are usually several processes running concurrently in a UNIX system.

3

ps command

```
% ps a      # list all processes
  PID TTY          TIME CMD
 2117 pts/24    00:00:00 pine
 2597 pts/79    00:00:00 ssh
 5134 pts/67    00:00:34 alpine
 7921 pts/62    00:00:01 emacs
13963 pts/24    00:00:00 sleep
13977 pts/93    00:00:00 ps
15190 pts/90    00:00:00 vim
18819 pts/24    00:00:07 stayAlive
24160 pts/44    00:00:01 xterm
. . .
```

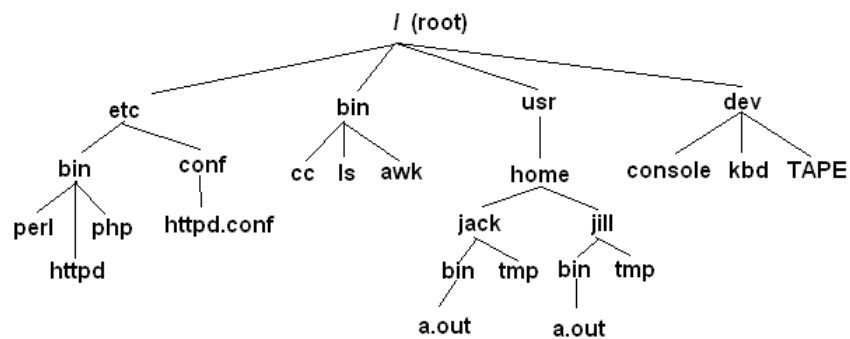

4

The File System

- Directory structure
- Current working directory
- Path names
- Special notations

5

Directory Structure

6

Current Working Directory

- Every process has a current working directory.
- In a shell, the command **ls** shows the contents of the current working directory.
- **pwd** shows the current working directory.
- **cd** changes the current working directory to another.

7

Path Names

- A path name is a reference to something in the file system.
- A path name specifies the set of directories you have to pass through to find a file.
- Directory names are separated by '/' in UNIX.
- Path names beginning with '/' are absolute path names.
- Path names that do not begin with '/' are relative path names (start search in current working directory).

8

Special Characters

- . means the current directory
- .. means the parent directory
 - `cd ..`
 - `cd ../Notes`
- ~ means the home directory
 - `cat ~/lab3.c`
- To go directly to your home directory, type
 - `cd`

9

Frequently Used Terminal Keystrokes

- Interrupt the current process: Ctrl-C
- End of file: Ctrl-D
- Read input (stdin) from a file
 - `a.out < input_file`
- Redirect output (stdout) to a file
 - `ls > all_files.txt` # overwrites all_files.txt
- Append stdout to a file
 - `ls >> all_files.txt` # append new text to file

Wildcards (File Name Substitution)

- Goal: referring to several files in one go.
- ? match single character
 - `ls ~/C2031/lab5.???`
 - `lab5.doc lab5.pdf lab5.out`
- * match any number of characters
 - `ls ~/C2031/lab5.*`
- [...] match any character in the list enclosed by []
 - `ls ~/C2031/lab[567].c`
 - `lab5.c lab6.c lab7.c`
- We can combine different wildcards.
 - `ls [e]*.c`
 - `enum.c ex1.c ex2.c`

11

File Manipulation Commands

`ls, cp, mv, rm`
`touch`
`pwd, mkdir, rmdir`
`cd`
`chmod, chown, chgrp`
`find`

12

find command

Search from the current directory:

```
% find . -name "ex1.c"
./Ptr2Ptr/ex1.c
./ex1.c
```

```
% find . -name "e*.c"
./Midterm/err.c
./ex2.c
./Ptr2Ptr/ex2.c
./Ptr2Ptr/ex1.c
./enum.c
./ex1.c
```

Search from the home directory:

```
% find ~ -name "ex1.c"
/cs/home/utn/Temp_2031/Misc/ex1.c
/cs/home/utn/Demo_2031/Ptr2Ptr/ex1.c
/cs/home/utn/Demo_2031/ex1.c
```

Search from the specified directory:

```
% find ./Test1/Archive/ -name "*.c"
./Test1/Archive/convertMain.c
```

13

Commonly Used Commands

- Get on-line help with **man**

man chgrp

- Some commonly used commands

cat, more

who

grep

echo

date

sort

wc

ps, kill

history

14

cat, more, tail

```
% cat phone_book
Yvonne 416-987-6543
Amy 416-123-4567
William 905-888-1234
John 647-999-4321
Annie 905-555-9876
```

```
% more phone_book
Similar to cat, except that the file
is displayed one screen at a time.
```

```
% tail myfile.txt
Display the last 10 lines

% tail -5 myfile.txt
Display the last 5 lines

% tail -1 myfile.txt
Display the last line

% tail +3 myfile.txt
Display the file starting from the
3rd line.
```

15

echo

- When one or more strings are provided as arguments, echo by default repeats those strings on the screen.

```
% echo This is a test.
This is a test.
```

- It is not necessary to surround the strings with quotes, as it does not affect what is written on the screen.
- If quotes (either single or double) are used, they are not repeated on the screen.

```
% echo 'This is' "a test."
This is a test.
```

- To display single/double quotes, use `\'` or `\"`

16

echo (cont.)

```
% echo a \t b
a t b
% echo 'a \t b'
a      b
% echo "a \t b"
a      b
```

17

UNIX Filter grep

```
% grep 'char' *.c
arr.c:  char s[] = "2031";
char.c:  char c;
char.c:  c = getchar();

% grep '1302ESC' cse*/lab3.c

% grep -i 'Char' *.c
arr.c:  char s[] = "2031";
char.c:  char c;
char.c:  c = getchar();
```

```
% grep -v 'char' *.c
Search for lines that do not
contain string char.
```

```
% grep 'bea[nm]' *.txt
Search for lines that contain either
bean or beam.
```

```
% grep '[0-9][0-9][0-9]' *.c
Search for lines that contain a
sequence of 3 (or more) digits.
```

18

grep (cont.)

```
% grep -n 'char' *.c
```

Also display the line numbers.

```
% grep '[3]' *.c
```

```
% grep '3' *.c
```

Search for lines that contain digit 3.

```
% grep '\[3\]' *.c
```

Search for lines that contain string [3].

```
% grep '\[' *.c
```

19

WC

```
% wc enum.c
```

```
14  37 220 enum.c
```

```
% wc -c enum.c
```

```
220 enum.c
```

```
% wc [e]*.c
```

```
14  37 220 enum.c
```

```
17  28 233 ex1.c
```

```
21  46 300 ex2.c
```

```
52 111 753 total
```

```
% wc -w enum.c
```

```
37 enum.c
```

```
% wc -l enum.c
```

```
14 enum.c
```

20

sort

```
% cat phone_book
Yvonne 416-987-6543
Amy 416-123-4567
William 905-888-1234
John 647-999-4321
Annie 905-555-9876

% sort phone_book
Amy 416-123-4567
Annie 905-555-9876
John 647-999-4321
William 905-888-1234
Yvonne 416-987-6543
```

Try these options:

```
sort -r
    reverse normal order
sort -n
    numeric order
sort -nr
    reverse numeric order
sort -f
    case insensitive
```

21

cmp, diff

```
% cat phone_book
Yvonne 416-987-6543
Amy 416-123-4567
William 905-888-1234
John 647-999-4321
Annie 905-555-9876

% cat phone_book2
Yvonne 416-987-6543
Amy 416-111-1111
William 905-888-1234
John 647-999-9999
Annie 905-555-9876
```

```
% cmp phone_book phone_book2
phone_book phone_book2
differ: char 30, line 2

% diff phone_book
phone_book2
2c2
< Amy 416-123-4567
---
> Amy 416-111-1111
4c4
< John 647-999-4321
---
> John 647-999-9999
```

22

who

```
% who
ossama pts/13 Nov 7 00:22 (ip-198-96-36-11.dynamic.yorku.ca)
hoda pts/21 Nov 4 16:49 (gomez.cs.yorku.ca)
gordon pts/24 Nov 5 10:40 (bas2-toronto08-1096793138.dsl.bell.ca)
minas pts/29 Nov 2 14:09 (monster.cs.yorku.ca)
jas pts/37 Oct 18 12:36 (brayden.cs.yorku.ca)
utn pts/93 Nov 7 12:21 (bas2-toronto44-1177753778.dsl.bell.ca)
```

- User name
- Terminal associated with the process
- Time when they logged in

23

kill

```
% ps a
  PID TTY          TIME CMD
 2117 pts/24    00:00:00 pine
 2597 pts/79    00:00:00 ssh
 5134 pts/67    00:00:34 alpine
 7921 pts/62    00:00:01 emacs
13963 pts/24    00:00:00 sleep
13976 pts/43    00:00:00 sleep
13977 pts/93    00:00:00 ps
15190 pts/90    00:00:00 vim
24160 pts/44    00:00:01 xterm
. . .

% kill -9 7921

9 is the KILL signal
```

24

history

```
% history 10
 323 12:45  ls
 324 12:47  cd Demo_2031/
 325 12:48  ls
 326 12:48  m ex1.c
 327 12:49  who
 328 12:50  history 10
 329 12:52  ls -a
 330 12:56  ls Stack/
 331 12:57  ls
 332 12:57  history 10
```

25

Pipes

- Pipe: a way to connect the output of one program to the input of another program without any temporary file.
- Pipeline: connection of two or more programs through pipes.

- Examples:

```
ls -l | wc -l      # count number of files
who | sort         # sort user list
who | wc -l        # count number of users
who | grep 'utn'   # look for user 'utn'
ps a | grep 'emacs' # look for process emacs
```

26

NEVER-DO List in UNIX

- Never switch off the power on a UNIX computer.
 - You could interrupt the system while it is writing to the disk drive and destroy your disk.
 - Other users might be using the system.
- Avoid using `*` with `rm` such as `rm *`, `rm *.c`
- Do not name an important program `core`.
 - When a program crashes, UNIX dumps the entire kernel image to a file called `core`.
 - Many scripts go around deleting these `core` files.
- Do not name an executable file `test`.
 - There is a Unix command called `test`.

27

Next time ...

- UNIX Basics 2
- Writing Shell Scripts
- Reading: Chapters 1 and 2
“Practical Programming in the UNIX Environment”
