# CSE1720

Week 06, **Class Meeting 16** (Lecture 11)

---

Winter 2013 ♦ Tuesday, Feb 12, 2013

**YORK**  
UNIVERSITÉ  
UNIVERSITY 

## Goals for today's class meeting

- Clarify: status of lab exercise (Friday's lab was a snow day)
- Opportunity to ask questions about upcoming written test on Thursday
- In-class exercises about inheritance (Ch 9)

## Week 05 Lab Exercise

- Thursday's lab (Feb 7) took place, but Friday's lab (Feb 8) did not due to university closure due to snow
- Exercise due date will be extended to Monday, Feb 18, 2013, 11:59pm
- Foad will squeeze in some discussion during this Friday's lecture

3

## Written Test #1

- Thursday, Feb 14<sup>th</sup>, TEL 0007; starts at **10am sharp**
- Closed book test; Appendices will be provided for any code or APIs that are covered by the test.
- Test will cover:
  - all of the material that we covered in lecture, including the code base
  - Chapters 7 and 8 of the text book.
- Types of questions:
  - questions, T/F questions, and multiple-choice questions.
  - draw UML Class Diagram, given either a small code base or the APIs for a set of classes

4

## Questions about Inheritance

- General properties of subclasses: **RQ 9.1 – 9.7, 9.29**
- Rationale for subclass design: **RQ 9.8 – 9.9**
- Substitutability principle: **RQ 9.10 – 9.12**
- Early vs Late Binding: **RQ 9.13 – 9.19**
- Manual Casting (in Subclass Context): **RQ 9.20 – 9.23**
- Interfaces, Abstract Classes: **RQ 9.24, 9.27 – 9.28**
- Instantiation (in Subclass Context): **RQ 9.25 – 9.26**
- Strong typing: **RQ 9.30 – 9.32**

5

## General Properties

**RQ9.1** How do you determine whether a class extends another... :

- given the class' API?
- given a UML class diagram?
- given the code definition written in Java?

**ANSWER:**

6

## General Properties

Identify parent-child class relationships in our game codebase...

What can you say about the features about the child?

\*a class's *features* are its attributes and methods

**ANSWER:**

7

## General Properties

**RQ9.5** Can a child class have more than one parent class?

Can a parent class have multiple child classes?

**ANSWER:**

8

## General Properties

Identify, in the codebase, a place where a child class has a method that has the same name as a parent's method

**ANSWER:**

9

## General Properties

**RQ9.6** If a subclass has a method with the same name as a parent's method, which method will appear in the subclass API and in which table?

Will your answer change if the child's method has the same parameter list as that of the parent?

**ANSWER:**

10

## About the methods in a child class...

They fall under the following **three** categories:

- **new** method
  - if the method signature is defined **ONLY** in the child class and not defined in parent (applies even if method name is found in parent, but signature is different)
- **inherited** method
  - if the method signature defined **ONLY** in the parent class; this method is also available to child instances
- **overridden** method
  - if method signature defined in the parent class **AND also** defined in the child class
  - the child class provides another version of the method functionality that **overrides** the parent's method functionality

11

## About the fields in a child class...

They fall under the following **three** categories:

- **new** field
  - if the field is defined **ONLY** in the child class and not defined in parent
- **inherited** field
  - if the field defined **ONLY** in the parent class; the child can use it as its own
- **overshadowed** field
  - if a field name in the child is the SAME as a field in the parent (regardless of type). Parent field cannot be used, since the child's field will block it

12

## General Properties

**RQ9.29** If class C extends class P, is C a descendant of the Object class?

What *kind* of descendant class?

A direct descendant or indirect descendant?

**ANSWER:**

13

## Review

**Chapter 1, In More Depth 1.6, p. 24**

What is a “type”?

**ANSWER:**

14

## Review

This description of “type” was intended for primitive types.

How do we extend the description to capture non-primitive types?

**ANSWER:**

15

## Substitutability

**RQ9.10** What is the substitutability principle?

In Java? In everyday life? (RQ9.12)

**ANSWER:**

16

## Substitutability

Identify places within the codebase in which the substitutability principle has been used

**ANSWER:**

17

## Substitutability

**RQ9.11** In which contexts can the substitutability principle be applied?

**ANSWER:**

18

# Binding

What is meant by early binding?

What is meant by late binding?

**ANSWER:**
