Preparatory Work : Class Meeting 04 (Wed, Jan 15, 2014)

Task #1

There are many types of research projects undertaken that concern hypermedia.

Choose one such research project.   You may wish to search the WWW for a project. You may wish to look in the ACM digital library in the proceedings of related conferences (e.g., 'Hypertext and hypermedia', 'World Wide Web', 'Computers and Accessibility', or 'Conference on Human Factors in Computing Systems').

Determine the type of the research project (refer to the course project specification). Investigate the methodology that was employed in undertaking the project.
Be prepared to present your findings when asked.

Document your source(s), using the ACM Reference Format.
