

Course Policy for Academic Honesty on Homework Assignments

For each homework assignment, you may either work by yourself or with a partner. If you work with a partner, the two of you should hand in a single set of solutions with both of your names on it. Both partners should work on every problem, since the assignments are intended to help you learn the material and receive feedback on your work.

The solutions you hand in should be the work of you and your partner (if you have one). Thus, if you discuss an assignment problem with anyone other than your partner for that assignment, you may discuss only the general approach to solving the problem, not the details of the solution, and you should not take any written notes away from such a discussion. Also, you must list on the cover page of your solutions any people (besides your partner) with whom you have discussed the problems. While writing your solutions to hand in, you may look at the course textbook and your own lecture notes, but no other outside sources.

It is important that you also look at the departmental guidelines on academic honesty. They are available at <http://www.cse.yorku.ca/admin/coscOnAcadHonesty.html> .

I have read and understood the above guidelines on academic honesty for EECS 2001.
