Administrative Issues

EECS1022:
Programming for Mobile Computing
Winter 2018

CHEN-WEI WANG

Instructor

- How may you call me?

  "Jackie" (most preferred),

  "Sir", "Professor", "Professor Wang", "Professor Jackie", "Hey", "Hi", "Hello"

- Office: Lassonde Building 2043

- Office hours: 4:30pm – 6:30pm on Mondays and Wednesdays. Or by appointments.

- When you need advice on the course, speak to me!

- Throughout the semester, feel free to suggest ways to helping your learning.

A Friendly Caveat

This is **_not_** going to be an easy course.

○ You need to work HARD in order to receive a decent grade.
○ Android development is meant to be a way to having you engaged.
○ Acquiring the programming and program-solving skills is the key to success in this course.

Course Information

- Course moddle page:
  `http://moodle.info.yorku.ca/`
  Log in and look for Section M of EECS1022
  There is a course forum. Post your questions!!
  Never share solutions to labs on the forum!!!
- For personal, course-related inquiries:
  eecs1022.w18@gmail.com
- All resources will be posted on my website:
  `https://www.eecs.yorku.ca/~jackie/teaching/`
  `lectures/index.html`
- Check your emails regularly!

Lectures

- *One person talks at a time* in class, please!
- I will typically go without a break until 16:20.
- But you can feel free to take a break, as long as it is **SILENT**!!
- In class: core concepts, examples, *your engagement*
- I *can't slow down too much* in the class, for otherwise I can't (nearly) finish the agenda set up by the CS department.
- I will try to *pause* frequently for questions.
- Bring your own laptop, with Android Studio installed.

Attendance

- Attendance to *all* lectures and labs are necessary.
- Don't consider coming to classes as pressure.
- It's for your best interests of learning!
- But if you only come to play with your mobile/computer, or to chat with friends, I'd rather you not come.

It is absolutely critical for you to complete (watching, doing, understanding) the tutorial series on building a BMI calculator app:

```
https://www.eecs.yorku.ca/~jackie/teaching/
        tutorials/index.html#oop_mobile
```

- Model-View-Controller (MVC) Pattern
- Object Orientation
- Test-Driven Development
- Break points and Debugger

Lab Tests
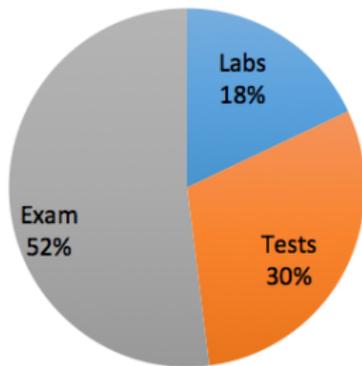

- Computer tests, based on lab exercises and lecture materials
  - Your submissions will be graded by some automated program.
  - No partial marks will be given to program that do not pass the grading tests, for whatever reasons.

  ∵ This is a foundational programming course, upon which many of your future courses depend (e.g., EECS2030, EECS2011).

  ∴ You'd rather struggle now as opposed to in your 2nd year!

Academic Integrity

The moral code or ethical policy of academia:

- avoidance of cheating or plagiarism;
- maintenance of academic standards;
- honesty and rigor in research and academic publishing.

Pay careful attention to *all* occasions where the submitted work is to be graded and receive credits (i.e., labs, quizzes, assignments, tests, exams).

It is *absolutely not* acceptable if, in any of these occasions, you:

- share your (programming or written) solutions with others;
- copy and paste solutions from elsewhere and claim that they are yours.

Need Accommodation for Tests/Exams?

- Please approach me (email, in person) as soon as possible, so we can make proper arrangements for you.
- We will work out a way for you to gain the most out of this course!
