EECS2030 (B & E) Fall 2021 Lab 0 Part 2

Review on Object-Oriented Programming in Java

Chen-Wei Wang

Release Date: Wednesday, September 15 Due Date: 14:00 EST, Friday, September 24

Texts in blue are hyperlinks to the corresponding documents/recordings.

Your lab assignment is **not** graded during the weekly scheduled lab sessions.

Follow the instructions to submit (via the web submit link) the required files for grading. Emailing your solutions to the instructor or TAs will not be accepted.

Policies

- Your (submitted or un-submitted) solution to this lab exercise (which is not revealed to the public) remains the property of the EECS department. Do not distribute or share your code in any public media (e.g., a non-private Github repository) in any way, shape, or form. The department reserves the right to take necessary actions upon found violations of this policy.
- When you submit your lab, you claim that it is **solely** your work. Therefore, it is considered as **a violation of academic integrity** if you copy or share **any** parts of your Java code during **any** stages of your development.
- When assessing your submission, the instructor and TA may examine your code, and suspicious submissions will be reported to the department if necessary. We do not tolerate academic dishonesty, so please obey this policy strictly.
- You are entirely responsible for making your submission to the TA in time. Back up your work **periodically**, so as to minimize the damage should any sort of computer failures occur. Follow this tutorial series on setting up a **private** Github repository for your Java projects.
- The deadline is **strict** with no excuses: late submissions will **not** be accepted.

Contents

1	Task 1: Complete Tutorial Videos	3
2	Task 2: Study Materials	3
3	Exporting the Completed Project	4
4	Submission	5

Learning Outcomes

By completing the assigned exercises of this lab, you are expected to be able to:

- 1. Use simple Linux commands on a terminal.
- 2. Exercise a simple workflow of Github.
- 3. Understand the Observe-Model-Execute process of object orientation.
- 4. In the Eclipse IDE (Integrated Development Environment):
 - Create a new Java project.
 - Create a new Java class serving as a console application (with the main method).
 - Understand the separation of concerns (using packages): model, console_apps, and junit_tests.
 - Write Java model classes composed of:
 - classes, attributes, methods (constructors, accessors, and mutators)
 - single-valued, referenced-typed attributes
 - multi-valued, referenced-typed attributes
 - reference aliasing
 - new keyword, this keyword, dot notation
 - Run a Java class with with the main method as a console Java application.
 - Write JUnit test cases manipulating the model classes via assertions.
 - Use the <u>debugger</u> to:
 - Examine the object *state* (i.e., attribute values)
 - Explore the program behaviour (via step over, step into, step out)
 - Export an existing project as an archive file.
- 5. On paper, $\underline{\text{visualize}}$ object creations and method calls.

Setting Working Environment: Eclipse, Remote Labs, Github

For details on installing Eclipse, creating an EECS account, using the remote lab, and creating a Github account, refer to the instructions for Lab0P1. Here is a video walking you through the setup process:

https://www.youtube.com/watch?v=sYAcSyeoio8&list=PL5dxAmCmjv_6wy2m0yq2w0bIWPz4tAxW6&index=1

1 Task 1: Complete Tutorial Videos

• Here is a tutorial series for you to review object-oriented programming (OOP) in Java, and to obtain hands-on experience on Eclipse IDE (required for this course):

https://www.eecs.yorku.ca/~jackie/teaching/tutorials/index.html#refurbished_store

- As you study through the example Java classes in the tutorial videos, you are required to **type them out**:
 - Spellings of names of the packages, files, classes, and methods must be exact (and case-sensitive), as we will run some automatic checks to grade the submitted files.
 - Feel free to add comments or new Java classes/methods to experiment.
- To submit for $\underline{Part\ 2}$ of your Lab0, complete the study of 17 tutorial videos (Parts 14 30). You are expected to re-produce all Java classes demonstrated in the tutorials.
- No additional exercises are required for Lab0P2 submission.
- You can find the iPad notes illustrated in the tutorial videos here:

https://www.eecs.yorku.ca/~jackie/teaching/tutorials/notes/Building%20an%20Apple%20Refurbished% 20Store%20App%20in%20Java.pdf

2 Task 2: Study Materials

- Here is a list of required materials to study alongside with the review tutorials (Section 1):
 - 1. Slides on Classes and Objects:

```
https://www.eecs.yorku.ca/~jackie/teaching/lectures/2021/F/EECS2030/slides/
01-Classes-and-Objects.pdf
```

- 2. Written Notes:
 - Inferring Classes/Methods from JUnit Tests:

```
https://www.eecs.yorku.ca/~jackie/teaching/lectures/2021/F/EECS2030/notes/
EECS2030_F21_Inferring_Classes_from_JUnit.pdf
```

- Declaring and Manipulating Reference-Typed, Multi-Valued Attributes:

```
https://www.eecs.yorku.ca/~jackie/teaching/lectures/2021/F/EECS2030/notes/
EECS2030_F21_Tracing_PointCollectorTester.pdf
```

Note. Your coming programming and written tests will be based on the above slides and written notes.

- Here is a list of **optional** materials to study:
 - 1. Tutorial Videos on Introducing Procedural and Object-Oriented Programming in Java:

```
https://www.eecs.yorku.ca/~jackie/teaching/tutorials/index.html#java_from_scratch_w21 Specially:
```

- Week 1: **Eclipse** work environment
- Week 2c, 2d, 2e: **Debugger** in Eclipse
- Weeks 6, 7, 8: Classes and Objects
- 2. Lecture materials (recordings, slides, notes, codes) for EECS1022-W21:

```
https://www.eecs.yorku.ca/~jackie/teaching/lectures/index.html#EECS1022_W21
```

You may refer to the relevant parts for which you find the need to review.

3 Exporting the Completed Project

You are required to submit a Java project archive file (.zip) consisting all subfolders.

In Eclipse:

1. Right click on project AppleShop.
Then click Export

2. Under General, choose Archive File.

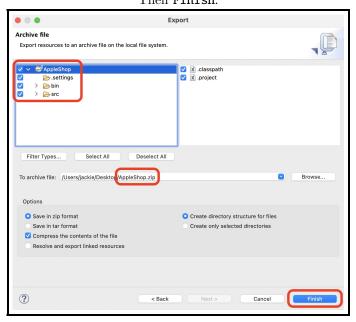

3. Check the top-level AppleShop

Make sure that all subfolders are checked: .settings, bin, and src.

Under To archive file: browse to, e.g., desktop, and save it as AppleShop.zip (case-sensitive)

Then Finish.

Note. In case you have concerns about exporting and submitting the **.setting** subfolder: it will be kept confidential and access-protected on the EECS department server.

4 Submission

1. Verify that the project folder has the following structure:

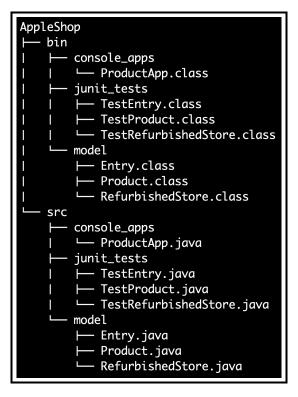

Figure 1: Lab0P2 Expected Project Structure

Names of the packages, files, classes, and methods must be exact (and case-sensitive), as we will run some automatic checks to grade the submitted files.

- e.g., If you have a class product.java rather than Product.java, it's considered as wrong.
- 2. From Section 3, you have already exported your Java project on Eclipse as an archive file: AppleShop.zip. Click on the following link (for which you will be prompted to enter your <u>EECS account</u> login credentials):

https://webapp.eecs.yorku.ca/submit/?acadyear=2021-22&term=F&course=2030&assignment=Lab0P2

• You **must** login into the web submit page using your EECS login credentials (otherwise, your submitted folder on the EECS server may <u>not</u> be identified properly):

Note. If you are prompted for your PPY login instead, then it might be due to an earlier login session. In this case, login first with your PPY account credentials, then <u>log out</u>. Then, clicking on the above submission link should lead you to the login page for EECS account credentials.

• Ensure that the correct academic year, term, course, and assignment are chosen. Then, browse to the archive file AppleShop.zip and click on Submit Files.

- You may upload <u>as many draft versions as you like</u> before the deadline only the <u>latest</u> submitted version of your work <u>before the deadline</u> will be graded.
- It is your sole responsibility to download and ensure that:
 - The submitted zip file is the one you intend to be graded (e.g., non-empty, not the starter code).
 - The unzipped project conforms to the structure as specified in Figure 1.
