

Problem on Recursion

<https://codingbat.com/prob/p137918>

Given a string that contains a single pair of parenthesis, compute recursively a new string made of only of the parenthesis and their contents, so "xyz(abc)123" yields "(abc)".

parenBit("xyz(abc)123") → "(abc)"

parenBit("x(hello)") → "(hello)"

parenBit("(xy)1") → "(xy)"
