**Written Test 2 Review**

# Algorithm

postcondition:  
assertions relating  
the input &  
output.

last-set value

\* assert  $\forall i. i \in [1..len(output)]$  postcondition  
:  $output[i] \leq output[i+1]$

Q. Is this postcondition correct & complete?

input:  $\langle\langle 5, 3, 1, 2 \rangle\rangle$   
output:  $\langle\langle 1, 2, 3, 5 \rangle\rangle$

- Given a correct pair of input/output, assertion should pass.

input:  $\langle\langle 5, 3, 1, 2 \rangle\rangle$   
output:  $\langle\langle 2, 46, 89, 92 \rangle\rangle$

Assertion should fail on this, but it actually passes.

- Given an incorrect pair of input/output, assertion should fail.
