EECS3342: System Specification and Refinement
Section E – Fall 2024

Grading Scheme Subject to Changes until: Wednesday, September 18, 2024

Last Updated: October 15, 2024

- Added one-week grace period for submitting Lab3
- Changes on the release/due dates for: Lab5

Course Syllabus

1 Course Policies

To ensure a smooth, fair, and effective in-person delivery of this course:

1. **Team Work Encouraged for Labs/Assignments**: You will receive **full** marks as long as submission attempts are made by the corresponding submission deadlines.

   Your submitted labs/assignments, though awarded **full** marks automatically, will **not** be graded. Instead, you are expected to compare your submitted answers to the posted solution sets, and to ask questions in time to clarify doubts. Therefore, it would be your best interest in submitting work representing your **true** and **best** attempt.

   The rationales of this policy are that: **1)** you can **rest assured that you will not lose any marks from labs (as long as you submit them by the deadlines)**; and **2) you can just focus on the learning by seeking help from colleagues, TAs, and Jackie without worrying about violating the academic honesty policy**.

   Please do not abuse this policy: **you are still 100% responsible for acquiring the intended understandings and skills from these labs**. Be advised that **later scheduled (written and programming) tests will be based on these labs**, so if you chose **not** to learn the materials responsibly (e.g., relying much on your colleagues, submitting incomplete work and only intending to look at solutions when they are made available), you risk **poor performance** in subsequent tests and the exam.

2. **No Team Work Allowed for Scheduled Tests**: All **written & programming tests** are to be completed **individually** (i.e., **team work is forbidden**).

   When a scheduled test takes place between different lab sessions, until all test sessions conclude, it is considered **a violation of academic integrity** if you communicate in any way, shape, or form with others about the test(s) already given.

3. **Plagiarism**: When submitting each of your **written** tests and **programming tests**, you claim that it is **solely** your work. It is considered as **a violation of academic integrity** if you copy or share **any** parts of your work (e.g., code, notes) during **any** stage of your development. The instructor and TAs may examine all submissions, and suspicious ones will be reported *immediately* to Lassonde as *a breach of academic integrity.* **We do not tolerate academic dishonesty**.

4. **Meeting Lab/Test Deadlines**: **Stringent deadlines** are imposed on all scheduled **written** tests (to be completed and submitted via eClass), as well as scheduled **programming** tests and **labs** (to be submitted via the *web submit* to the EECS server). An in-person **exam** will be scheduled by the registrar office to take place during the **exam period**. It is your responsibility for meeting all deadlines.

5. **Late Enrolment**: Students who are not yet officially registered should assume an eventual successful enrolment into the course and are responsible for: **1)** contacting the section instructor **within Week 1** for course information (e.g., lecture materials, lab assignments access and deadlines); and **2)** attending lectures, submitting lab assignments, and taking scheduled tests in time.

   No lab deadline extensions or deferred tests will be accommodated.

2 PREREQUISITES

– **General Prerequisites**: A cumulative grade point average (GPA) of 4.50 or better over all previously completed Major EECS courses. The GPA computation excludes all EECS courses that have a second digit 5, or are Co-Op/PEP courses.
– LE/EECS 2030 3.00 <u>or</u> LE/EECS 1030 3.00
– LE/EECS 2011 3.00
– SC/MATH 1090 3.00

3 INSTRUCTORS

– Chen-Wei (JACKIE) Wang
  • Contact: jackie@eecs.yorku.ca   (https://www.eecs.yorku.ca/~jackie/)
  • Office Hours:
      ∗ In-Person: 15:00 – 16:00, Tuesdays & Thursdays
      ∗ Zoom: 15:00 – 16:00, Mondays
      ∗ by appointments (Zoom or In-Person)
  Campus Office: Lassonde Building, Room 2043   [19, D5 in the Keele campus]
  Virtual Office: https://yorku.zoom.us/my/jackie.loves.oxford

4 VENUES

– In-Class Lectures
  • 17:30 – 19:00, Tuesdays & Thursdays
  LSB 105 (Life Science Building)   [C4/90 on the Keele Campus Map]
– Scheduled Labs
  • Lab 01/02: 13:30 – 14:30, Wednesdays
  LAS 1002/1002B (Lassonde Building)   [D5/19 on the Keele Campus Map]
  • Lab 03/04: 14:30 – 15:30, Wednesdays
  LAS 1002/1002B (Lassonde Building)   [D5/19 on the Keele Campus Map]

5 eCLASS SITE

– A single site for Section E: `https://eclass.yorku.ca/course/view.php?id=126200`

6 STUDY MATERIALS

– The main study materials will be made available on the lectures page:
   `https://www.eecs.yorku.ca/~jackie/teaching/lectures/index.html#EECS3342_F24`
– *Modeling in Event-B* (2010), Cambridge University Press (`http://www.event-b.org/`)
   by Jean-Raymond Abrial

> By agreement with the author, a <u>draft</u> of the book is available for the private use of EECS
> students at York, and through a valid PPY username/password on the course eClass site.
> This book draft is copyrighted by the author and may not be distributed in any manner.
> By logging in and downloading this book draft, you agree to abide by all the copyright
> conditions. Note that there are errors and typos in the notes. The final text may be
> purchased by students.

7 AVAILABLE HELP RESOURCES

– Jackie's office hours   [regular; request appointments if needed]
– Scheduled lab sessions   [attend any of them to ask TA and/or Jackie questions]
– TA office hours   [on demand via Zoom; see eClass for TA's contact info]

8   Course Description

This course provides students with an understanding of how to use mathematics (set theory and predicate logic) to specify and design correct computer systems whether the systems are sequential, concurrent or embedded. The course stresses both the underlying theory as well as the ability to use industrial strength tools that can be applied in practice.

User requirements are formalized via an abstract mathematical model that is amenable to formal reasoning long before any programming activity is undertaken (e.g. as done in Event-B, Z and VDM). Successive models are like blueprints in traditional engineering disciplines and their mathematical nature allows us to reason about and predict their safety properties.

9   Course Learning Outcomes (CLOs)

Upon completion of the course, students are expected to be able to:

CLO1 Document requirements organizing them into appropriate categories such as environmental constraints versus functional properties (safety and progress).

CLO2 Construct high level, abstract mathematical models of a system (consisting of both the system and its environment) amenable to formal reasoning.

CLO3 Apply set theory and predicate logic to express functional and safety properties from the requirements as events, guards, system variants and invariants of a state-event model.

CLO4 Use models to reason about and predict their safety and progress properties.

CLO5 Plan and construct a sequence of refinements from abstract high-level specifications to implemented code.

CLO6 Prove that a concrete system refines an abstract model.

CLO7 Apply the method to a variety of systems such as sequential, concurrent and embedded systems.

CLO8 Use practical tools for constructing and reasoning about the models.

CLO9 Use Hoare Logic and Dijkstra weakest precondition calculus to derive correct designs.

10   Grading Scheme

		Subtotal
5 Labs (2% each)	10%	30%
2 "Programming" Tests (10% each)	20%	
2 Written Tests (10% each)	20%	70%
Exam (Cumulative)	50%	

11   Final Exam: Cumulative & Substantial

– Your final exam will be *cumulative*: it will cover **all** study materials.
  • It will be an opportunity for you to **continually** *synthesize* topics that are connected.
– Therefore, your final exam will be the **most substantial** grading component.
  • It assesses how competently you can apply the learned concepts and skills.
  • The best preparation is to constantly review and reflect on the covered topics.

12 MAPPING RAW MARKS TO LETTER GRADES

– For each grading unit, you will receive a **raw mark score** (not necessarily out of 100).
– The <u>**weighted sum**</u> of all grading units will be mapped to its letter grade.
  • Check the common **Grades and Grading Schemes**.
  • e.g., Say there are only two grading units: Exam (60%) and Lab1 (40%). Receiving 150 marks (out of 200) for Exam and 2 marks (out of 3) for Lab1 leads to a letter grade B (based on the weighted sum $\frac{150}{200} \times 60 + \frac{2}{3} \times 40 \approx 71.7$).

13 EXPECTED WEEKLY WORKLOAD

– Lassonde's recommendation is 3 – 4.5 hours per credit: *9 – 13.5 hours* for a 3.00 course.
– "In-Class" Hours:
  • In-Class Lectures   [3 hours]
    Optional: Schedule Labs, Office Hours
– "Out-of-Class" Hours:
  • Completing labs/assignments, Studying for Lectures/Tests   [6 to 10.5 hours]
– Given that this is a *foundational course*, it is **not unreasonable** that you find yourself needing more time to digest the materials and build the skills.

  The harder you work in this course, the easier you may find in subsequent years.

14 MISSED TESTS

If you missed a scheduled test with a valid reason, you are required to prepare the necessary documents and visit the instructor's office **within a week** after the scheduled test time. We will discuss the alternatives, depending on your situation.

15 ACCOMMODATION

If you are registered with the office of student accessibility services, you are required to visit the instructor's office hour **within the first two weeks** of the semester.
– We will discuss how to best accommodate your need, e.g., test time.
– The setup required by the in-lab tests is hard to be satisfied by the office location.
– Instead, we will accommodate your need by having you take tests in an EECS lab.
– If agreed, we will need you to inform the office of this and cancel your test bookings.

16 Attendance of Classes: Encouraged & Rewarding

- There are 23 upcoming in-class lectures in total (2 classes × 12 weeks − first class).
- Attending classes (in-time & focused) is an **indispensable** part of your learning.
- Despite it being your responsibility, Jackie would encourage you to attend classes by the following rewarding scheme:
  - Attendance will be taken **randomly** (via iClicker) on X classes ($10 \leq X \leq 23$)
    $\Rightarrow$ Attendance will be checked somewhere between every class and every other class.
  - Each attendance will be checked briefly (e.g., for a few minutes) at sometime between **5 minutes** after class starts and **5 minutes** before class ends.
  - **No** makeup attendance will be considered if you miss an attendance check (e.g., because you arrive late or leave early).
    $\Rightarrow$ Please **always** have the iClicker launched on your computer or mobile device.
  - At the end of the semester, say you attended Y classes:

$$
\begin{array}{lll}
\textbf{if} & Y < \lfloor 50\% \cdot X \rfloor & \rightarrow \quad \text{no bonus} \\[2mm]
\textbf{elseif} & Y \geq \lfloor 50\% \cdot X \rfloor & \rightarrow \quad .5\% \text{ bonus} \\[2mm]
\textbf{elseif} & Y \geq \lfloor 60\% \cdot X \rfloor & \rightarrow \quad 1\% \text{ bonus} \\[2mm]
\textbf{elseif} & Y \geq \lfloor 70\% \cdot X \rfloor & \rightarrow \quad 2\% \text{ bonus} \\[2mm]
\textbf{elseif} & Y \geq \lfloor 80\% \cdot X \rfloor & \rightarrow \quad 4\% \text{ bonus} \\[2mm]
\textbf{elseif} & Y \geq \lfloor 90\% \cdot X \rfloor & \rightarrow \quad 5\% \text{ bonus}
\end{array}
$$

  - For examples:

$X = 23$ (check at every class)

$$
\begin{array}{lll}
\textbf{if} & Y < 11 & \rightarrow \quad \text{no bonus} \\[2mm]
\textbf{elseif} & Y \geq 11 & \rightarrow \quad .5\% \text{ bonus} \\[2mm]
\textbf{elseif} & Y \geq 13 & \rightarrow \quad 1\% \text{ bonus} \\[2mm]
\textbf{elseif} & Y \geq 16 & \rightarrow \quad 2\% \text{ bonus} \\[2mm]
\textbf{elseif} & Y \geq 18 & \rightarrow \quad 4\% \text{ bonus} \\[2mm]
\textbf{elseif} & Y \geq 20 & \rightarrow \quad 5\% \text{ bonus}
\end{array}
$$

$X = 10$ (check at every other class)

$$
\begin{array}{lll}
\textbf{if} & Y < 5 & \rightarrow \quad \text{no bonus} \\[2mm]
\textbf{elseif} & Y \geq 5 & \rightarrow \quad .5\% \text{ bonus} \\[2mm]
\textbf{elseif} & Y \geq 6 & \rightarrow \quad 1\% \text{ bonus} \\[2mm]
\textbf{elseif} & Y \geq 7 & \rightarrow \quad 2\% \text{ bonus} \\[2mm]
\textbf{elseif} & Y \geq 8 & \rightarrow \quad 4\% \text{ bonus} \\[2mm]
\textbf{elseif} & Y \geq 9 & \rightarrow \quad 5\% \text{ bonus}
\end{array}
$$

– The above rewarding scheme **only** applies to in-class lectures.
– The allowable quota for you to miss classes, so as to get a particular bonus, already accommodates valid excuses (e.g., sick, family emergency).
  Therefore:

  > • once the attendance-taking window expired, **no** late responses will be accepted;
  >
  > • **no** reasons will be considered for missing attendance checks.

– The instructor reserves the right to **cancel** your bonus if, e.g.:
  • you just wait to be taken attendance and leave the class shortly after;
  • you attend classes but cause distractions (e.g., talking, using devices for irrelevant activities) to the instructor and/or to other students.

– What should I do to set up the iClicker for attendance checks?
  • Refer to this starter guide (to install iClicker on your mobile device):

    `https://lthelp.yorku.ca/polling-students/`
    `iclicker-student-app-quick-start-guide`

    When creating an iClicker account, be sure to supply your **student number** and **...@my.yorku.ca** email (you are responsible for **not** receiving the bonus if an invalid student number or email is supplied).
  • Ignore the first section "**For Courses using eClass integration**".
  • Follow these sections:
    ∗ "**For Courses not using eClass integration**"
    ∗ "**Add Your Instructor iClicker Course**":
      Search for "`EECS3342-E (F24) - Sys. Specification & Refinement`".
    ∗ "**Respond to Polls**"
  • When launching iClicker, it is critical that you allow iClicker to use your location; otherwise you will not be able to join the course and take attendance.
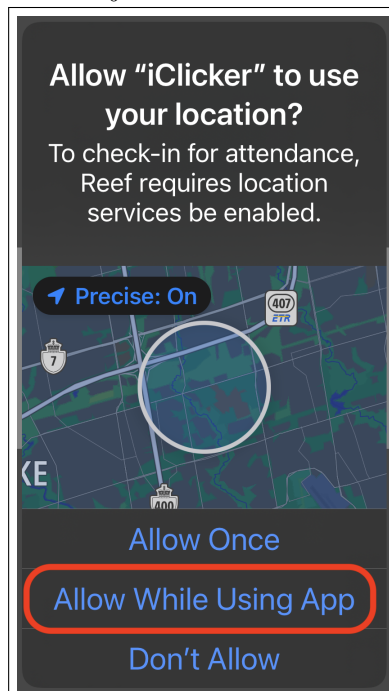

17 Semester Calendar

Figure 1 summarizes the schedule of required work items:

- – Attend the scheduled in-class lectures.
- – All tests take place during the lab sessions you are enrolled in:
  - • A written test lasts for ≈ 30 minutes.
  - • A programming test lasts for ≈ 50 minutes.
    Note. Specific details for each test will be announced in advance.
  - • If no test is scheduled, lab attendance is optional: TAs and/or Jackie will be there to answer your questions related to lab exercises and/or other course materials.
  - • When a lab exercise is not allocated any scheduled lab session, please seek help via:
    - ∗ Jackie's office hours
    - ∗ TA's on-demand Zoom sessions   [details sent in due course]

Figure 1: EECS3342-E F24 Semester Calendar – Expected Work Items

18   Coverage of Tests

Tentatively, referencing the semester calendar in Figure 1 (p11):

– Written Test 1 covers Lectures 1 – 11
– Written Test 2 covers Lectures 12 – 19
– "Programming" Test 1 covers Lab1 and Lab2
– "Programming" Test 2 covers Lab3 and Lab4

19   Weekly Schedule

In the time table below, each cell denotes a 30-minutes interval.

– Cell 10:00 denotes the interval starting at 10:00 and ending at 10:30.
– For example, office hours (on Mondays, Tuesdays, and Thursdays) start at 15:00 and end at 16:00.

	Monday	Tuesday	Wednesday	Thursday
8:30				
9:00				
9:30				
10:00				
10:30				
11:00				
11:30				
12:00				
12:30				
13:00				
13:30			EECS3342 Lab L1, L2	
14:00			EECS3342 Lab L1, L2	
14:30			EECS3342 Lab L3, L4	
15:00	Office Hour (Zoom)	Office Hour (In-Person)	EECS3342 Lab L3, L4	Office Hour (In-Person)
15:30	Office Hour (Zoom)	Office Hour (In-Person)		Office Hour (In-Person)
16:00				
16:30				
17:00				
17:30		EECS3342 E Lecture		EECS3342 E Lecture
18:00		EECS3342 E Lecture		EECS3342 E Lecture
18:30		EECS3342 E Lecture		EECS3342 E Lecture

20 (Tentative) Lecture Topics

Whereas the pace will be adjusted according to the class dynamics, the following topics are planned to be covered:

– Review on Math (Predicates, Sets, Relations)
– Reactive Systems: Bridge Controller
– Distributed Systems: FTP Protocol
