

Review Q & A - Mar. 10

Written Test

Asymptotic Analysis
Instantiating Generics

```

① boolean foundEmptyString = false;
② int i = 0;
③ while (!foundEmptyString && i < names.length) {
④     if (names[i].length() == 0) {
⑤         /* set flag for early exit */
⑥         foundEmptyString = true;
⑦     }
⑧     i = i + 1;
⑨ }

```

Worst case
is when
the "" is never found
→ # iterations =
 n
 $names.length$

names →

0	1	2	3	4	5
"A"	"B"	"C"	"D"	"E"	"F"
T	T	T	T	T	F

$n = 5$

① I

④, ⑤, ⑥ $6 \cdot n$

② I

③ $(n+1) \cdot 4$

iterations: n

times while cond. is evaluated: $n+1$

$I + I + (4n+4) + 6n$

$= 10n + 6$

General Tree Traversals: **Pre-Order** vs. **Post-Order**

Pre-Order Traversal from the Root

Post-Order Traversal from the Root

$a1.length == n$ $a2.length == m$

boolean contentsMatch (int[] a1, int[] a2) {

$n \cdot m$

for (int i = 0; i < a1.length; i++) {

for (int j = 0; j < a2.length; j++) {

// check to see if $a2[j] == a1[i]$ $O(1)$

}

for (int i = 0; i < a2.length; i++) {

for (int j = 0; j < a1.length; j++) {

// check to see if $a1[j] == a2[i]$ $O(1)$

}

}

$O(n \cdot m \cdot 1 + m \cdot n \cdot 1)$
 $= O(2 \cdot n \cdot m)$
 $= O(n \cdot m) \cdot n \cdot n$

a1

1	2	3	4
---	---	---	---

a2

2	1	4	3
---	---	---	---

) true

a1

1	2	3
---	---	---

a2

2	1
---	---

) false

$$S1 = S2 \Leftrightarrow S1 \subseteq S2 \wedge S2 \subseteq S1$$

highest power
 $\underline{5}n^{\underline{2}} + \underline{3}n^{\underline{1}} \cdot \underline{\log n}^{\underline{1}} + \underline{2}n^{\underline{1}} + \underline{5}$ is $O(n^{\underline{2}})$ $g(n)$

$$[c = 15] \quad n_0 = \underline{1}]$$

$f(n)$

Proof

$$\text{choose } C = |5| + |3| + |2| + |5| = 15$$

$$[n_0 = 1]$$

$$\text{Verify: } f(1) \leq \underline{C \cdot g(1)}$$

$$5 \cdot 1^2 + \underline{3 \cdot 1 \cdot \log 1} + 2 \cdot 1 + 5$$

$$\begin{aligned} &= 12 \\ &\leq 15 \cdot 1^2 = 15 \end{aligned}$$

```

public class MyClass<G, H, I> {
    private G[] a;
    public G m1 (I p1, H p2) {
        /* details of implementation omitted */
        return null;
    }
    public void m2 (H p1, G p2) {
        /* details of implementation omitted */
    }
}

```

Handwritten notes: I S B, obj1, [S], [I]

```

public class MyClass<G, H, I> {
    private G[] a;
    public G m1 (I p1, H p2) {
        /* details of implementation omitted */
        return null;
    }
    public void m2 (H p1, G p2) {
        /* details of implementation omitted */
    }
}

```

Handwritten notes: B S I, obj2, S, B

Now consider the following declarations from another class (which intends to use the above generic class):

```

Boolean b;
String s;
Integer i;
MyClass<Integer, String, Boolean> obj1;
MyClass<Boolean, String, Integer> obj2;

```

Handwritten notes: ✓, ✓, [obj1], [obj2]

Handwritten notes: word, X, does not compile

s = obj1.m2 ("alan", 5);	Choose...
b = obj2.m2 ("alan", false);	Choose...
obj1.m2 ("alan", 5);	✓ Choose...
obj2.m2 ("alan", false);	✓ Choose...
X obj1.m2 (5, "alan");	Choose...
obj2.m2 (false, "alan");	Choose...
i = obj1.m1 (true, "mark");	Choose...
b = obj2.m1 (3, "mark");	Choose...
b = obj1.m1 (true, "mark");	Choose...
i = obj2.m1 (3, "mark");	Choose...

Handwritten notes: word, X S, X I

Consider the following method which intends to reverse the input chain of nodes:

```
public Node<String> reverseOf(Node<String> input) {  
    Node<String> n2 = null;  
    Node<String> current = input;  
    while(current != null) {  
        String e = current.getElement();  
        Node<String> n1 = new Node<>(e, null);  
        /* missing some line(s) of code */  
        current = current.getNext();  
    }  
    return n2;  
}
```

n1.setNext(n2);
n2 = n1;

In the above method, some line or lines of code are missing (from where the comment is) in order for the implementation to be correct. Choose **the** line or **all** lines that are needed.

- ☐ n1.setNext(n2);
- ☐ n2 = n1;
- ☐ n2.setNext(n1);
- ☐ n1.setNext(current);
- ☐ n1 = n2;
- ☐ n2 = current;

Your answer is incorrect.

The correct answers are:

n1.setNext(n2);
n2 = n1;
